SOILWORKS NATURAL CAPITAL INVESTS IN TRUEALGAE™

Chantilly, VA, December 15: TrueAlgae (operating name of GreenTech Ventures, Inc.) is pleased to announce Soilworks Natural Capital's (Soilworks) investment in the company. The funds will enable TrueAlgae to increase its research regarding the impact of TrueSolum™, its algae based soil amendment, on soil quality and carbon sequestration. The investment will also support sales and marketing efforts to reach farmers and help them improve their soil and, in turn, their crop yields and quality.

TrueAlgae is an algae biotechnology company with an innovative, scalable algae production system. TrueAlgae's patent-pending production technology brings a closed-loop, contaminant free capability to quickly produce large quantities of valuable high-quality algae. Currently the company is providing algae products for use in agriculture to rejuvenate the earth's depleted soil organically, thus improving crop yields, farmer's profits, and the environment.

Soilworks Natural Capital is a public benefit company on a mission to accelerate the regenerative food movement by helping launch scalable businesses. The company is led by Lew Moorman and Ed Byrne, two highly successful entrepreneurs and investors, who developed a passion for regenerative agriculture while investing in and operating software companies at Scaleworks, a Texas-based venture equity firm.

“We are excited to welcome Soilworks as our investor and to work together to support bringing life back to the soil. We believe that healthy soils can play an important role in climate change. Our 100% organic soil amendment, TrueSolum, has proven to increase microbial diversity and organic matter in the soil leading to improved crop outputs”, said Nathaniel Jackson, CEO of TrueAlgae. “Lew and Ed are ideal partners for us as we all believe that we have an urgent need to replenish the soil and support a healthier environment .”

Soilworks believes that it’s time to re-design the food system with a focus on nutrition, soil, and planetary health. Regenerative agriculture is the most practical and cost-effective method of producing more nutrient-dense food that also increases soil carbon content. Earth’s soils contain about 2,500 gigatons of carbon, more than three times the amount of carbon in the atmosphere and four times the amount stored in plants and animals.

”I am excited by TrueAlgae’s highly scalable, proprietary microalgae production systems. Our team is confident that the company’s high-quality agricultural inputs will not only improve soil fertility and increase yields, but they will also enable growers to reduce their use of toxic, synthetic pesticides,” said Lew Moorman, Co-Founder of Soilworks Natural Capital.

About TrueAlgae™

TrueAlgae™, the operating name of GreenTech Ventures, Inc., is a US based biotechnology company with global reach. The revolutionary closed-loop, proprietary algae production technology allows delivery of high-quality microalgae for a multitude of uses including agriculture, aquaculture, human and animal nutrition as well as personal care products.

About Soilworks Natural Capital

Soilwork Natural Capital is a public benefit company investing in, acquiring, and operating companies that power the regenerative economy. The firm makes investments in innovative companies that help produce more nutrient-dense food, increase biodiversity, regenerate soil, and create more profitable farm enterprises. Soilworks Natural Capital is primarily headquartered in San Antonio, Texas.
